The SharePoint Framework, released in February 2017, is a key tool to achieve this. Microsoft Teams is the vendor's attempt to forge a new cloud collaboration model that uses SharePoint Online as a content services utility for sites, pages, news, lists and libraries. Traditional document-centered and email-enabled collaboration models – such as used by classic SharePoint Server – lack the flexibility and communications options found in the growing array of more modern but disparate tools. Hybrid deployments: Among Gartner clients, hybrid deployments – combining SharePoint Server and SharePoint Online – are not prevalent. These deployments in any case add more complexity to large-scale, on-premises SharePoint installations. Microsoft's goal is to lock customers into Office 365 as soon as possible.
